Introduction

Teaching Assistants, Teaching Fellows, and Research Assistants

The duties of a teaching assistant (TA), teaching fellow (TF), and research assistant (RA) are described below.

By university regulation, fullme graduate students may not work more than 20 hours on the BC payroll. Because we expect students on a teaching assistantship or research assistantship to work 15 hours per week, and because teaching fellowships require substantially more time, our graduate students may not be employed elsewhere in the university.

Teaching Assistants

Teaching assistants (TAs) are expected to work on one or two courses per semester, spending an average of 15 hours per weektaled across all courses. Students are required thend classes and hold office hours to supplement classroom instruction and explain grading decisions. Some weeks students will need to work more than 15 hours (e.g., when papers or other assignments must be graded), and some weeks students will need to react the total tot

Specific needs for TA support include the following:

- x Large amounts of grading
- x Significant writing required in a course, which often requires grading by TAs
- x Making up exams
- x Review sessions
- x Breakout or discussion sections
- x Guest lectures
- x Classdemonstrations
- x Clerical duties (photocopying, tracking down relevant readings, administrating scantron sheets, etc.)

Not all of the above tasks are relevant to all courses. The level of TA support provided to a course is based on assessment of the overated.

The course instructor will assign duties to each individual TA as appropriate given the substantive background and skills of the TA and equity across TAs. For example, if a TA has extensive background in the content covered in a course, that TA mightesent a guest lecture or hold primary responsibility for a review session or a break out section. If a TA has little or no substantive background, he or she might spend a high proportion of time on clerical tasks and would typically not be expected tool or run review sessions.

Minimum Requirement

Graduate students with a stipend from grant funding are not required to be a TA. However, to ensure our students receive teaching experience, all students are required to be a TA for at least two semesters during their graduate career.

Special Fellowships

The Graduate Proog Director serves on the Graduate Evaluation Committee, which evaluates each • $\check{s}\mu v \check{s}[\bullet \ \& \ CE \ P \ CE \bullet \ CE \circ \ CE \circ \ V u \ I \bullet]\bullet] \ v \bullet \ \mu \check{s} \bullet \ \&] \circ (\circ \circ \ A \bullet \ Z] \ \& Denoded \ I \ White Teaching Award$

Donald J. White Teaching Award

Second Year Research Project Approval Form (Form 4)

Due March 31: The Second Year Research Project Approval Form must be signed by the members of the Preliminary Advisory Committee.

Master's Degre Option

Due April 1: Students who have completed 30 graduate course credits may obtain a Master's degree. Doing so requires the following forms (with the appropriate signatures).

- x SecondYear Research Project Approval Form (Form 4)
- x M.A. Degree Option Form GSAS form)

External Funding

Students receive funding for five years, whether from Boston College or externally if the student is able to secure external funding for one or more of these years. For example, if a student receives external funding for two years, that student is entitled to three more years of department funding, not five more years. Students may request to stay on for a sixth year, but this is not encouraged and there is no promise of funding for a sixth year. You can view our policy on-**geah** funding in Continuing in the Program.

Students should continually seek external funding for their graduate work. The more research you have done and the clearer your ideas about future research, the greater your chances of getting funding. Try both public and private sources. The secret to success here is persistence. Your advisor will guide you in finding sources and preparing the proposal.

SecondYear Research Project

The primary focus of the first and second year is the Second Year Research Photecond to be the student empirical study designed in consultation with the advisor. The work must be carried out by the student while in the graduate program at BC. The literature review, design, execution, data analysis, and written presentation should be of ublishable quality, although publication depends upon whether a single or multiple-study paper makes the most sense for your topic. A list of possible journals to consider is

You have to take an ethics course administered by the IRB. It is very important that you keep your certificate when you passed ause you will likely be asked to provide proof of course completion for other grants and projects in which you may be involved at a later date.

Final Draft to Committee

The Second Year Research Project must be completed and presented to the Prelindivisory A Committee by March 15 of Year Two (after the advisor has read and approved that it go forth to the rest of the committee). This will allow time for revisions so that the final approval of the project will occur by March 31.

Defense

Presentation at Graduate Research Day

We encourage students to present their Secore ar Research Project at Graduate Research Day (held in the springof each year).

Flexibility

Additional Courses

The department may ask you to take an additional course if there is a deficiency in your background that is considered to impede graduate training and/or professional success. These requirements will be discused with you and the Graduate Student Evaluation Committee during your first semester.

Students may take additional courses, either within the department or in other related departments, in consultation with their advisor. Students may elect to take theto-ly of Psychology course, usually taken in year three, during the first two years. Students may take additional electives in the department or in other departments at Boston College, or they may eregister for courses at universities that form part of the consortium, with special permission of the Graduate Program Director.

Consortium Schools: Boston University, Brandeis University, Tufts University

While students are welcome to take courses beyond those required, your primary professional goal is to conduct research and submit papers for presentation at conferences and publication in appropriate journals.

Continuing in the Program

Years Three, Four, and Five

Early in the third year, students should meet with their committee to form a tentative planders Three and Four. Students are encouraged to begin pilot research for their dissertation, if they have not already done so, during the first semester of Year Three.

Dissertation Advisory Committee and Dissertation Defense Committee When you are ready t

Third Year Literature Review

Students identify an area (typically one in which they will carry out their dissertation research) and write a scholarly integrative review of the literature in that area. This paper is not mertily defind used as an introduction to an empirical paper. Nor do we have in mind arfeddioned annotated bibliography that reads like a list of unintegrated summaries. Instead, the third year literature review has the breadth and depth of a scholarly reviv to be published on its own. The aim is for an article that is a scholarly contribution to the field, providing an integration of the literature, a novel perspective, a tightly reasoned argument, and a firm conclusion. We have in mind the type of papepublished in Psychological Bulletin or Psychological Review. Some emphasize integration of empirical studies, others emphasize conceptual issues. Of course, the approach and emphasis are up to you.

Preparation

Students should meet regularly (at leastoen a week) with their advisor to identify an area, plan their review, and discuss the ongoing work of the review. A good idea is to read a number of review articles in

х

Interdisciplinary Doctoral Program

When departmental doctoral programs are unable to satisfy the interests of the student, an interdisciplinary doctoral program remains a possibility. A student interested in exploring such a possibility should make an inquiry the Graduate School Office

External Funding

For third and fourth-year students, there is predoctoral funding available from the APA and NIMH, as well as a wide variety of private foundations. Getting a grant in your third or fourth year will allow you to extend your time in graduate school, do more research, get more publications, and in the end, do better on the job market. (Getting grants looks very good on your CV.)

Policy on Sixth Year Funding for Doctoral Students

Our doctoral students are fully sup**pe**d for five years, either through grants that they or their advisors receive, or through university funding. Occasionally a student may wish to remain for a sixth year.

When the student is externally funded (directly, or via a faculty grant) or funded factors where s start- $\mu \% (\mu v \bullet U \& Z] \bullet] \bullet] V] \bullet o (\& \mu \% \& S \& Z \bullet \& \mu v \& v \& Z \bullet \& \mu v \& [\bullet who believe they might require a sixth year are strongly encouraged to seek external support well in advance.$

When the student requires university funding for a sixth year, the student must apply to the Graduate Program Director, explaining the need for a sixth year. Their advisor must also write in support of the additional year.

The Graduate Program Director and the Graduate Admissions Director will tog**etteen** the number of available university stipends for the coming year, and the total number of students that faculty desire to admit as incoming students. In rare circumstances, a particularly strong case for a sixth year could take priority over admittg a new student. If it is clear that there is an available slot to grant the request for a sixth year, a decision can be made within a month after applications are due.

However, when it is not clear how many university funded slots will be available gisioth must wait $\mu v \check{s}] o \& CE] o (\tilde{n}) (\check{s} Z \bullet \check{s} \mu v \check{s} [\bullet (] (\check{s} Z Ç OE U \acute{A} Z v \& \check{s} v \bullet (OE) u v \acute{A} there are unused university funded slots at that time, a sixth year of support may be granted.$

Students who apply for a sixth year of iversity funding that is not granted may appeal to their advisors (} $(P + \mu \otimes \otimes) P = \hat{S} = \mu P = \hat{S} = \hat{A} + \hat{A} = \hat{A$

ThreePaper Option

As an alternative to a traditional dissertation, Ph.D. students can compile three first author peer reviewed papers as a dissertant. 8(a 71 RG (e)9(rs a.d3pp)-4(7ld)4(e)] TJ ise9.00000anoaa.d3pp)-4(7ld)4(e)

student chooses the threpaper option, it will require the approval of their dissertation committee, and the student will be required to write scholarly introduction and discussion chapters that consider the three published papers as a redal body of research.

- x PSYC5575 Adnced Affective Neuroscience
- x PSYC5576 Methods in Human Brain Mapping
- x PSYC5577 The Hippocampus

Statistics Requirement (1 Course)

A firm knowledge of statistics is essential for branches of neuroscience research. Therefore, all students are required to take t least one semester of gradualevel statistics (usually PSYC5501).

Students are strongly encouraged to take additional statistics courses beyond this mester requirement. For some lines of research, additional statistics courses may be esaentised, students should consult with their advisory committees to determine into which statistics courses they should enroll.

Course Timeline

Ph.D. students typically take 15 credits in the first year, 15 credits in the second year, 4 credits in the third year, and a 4 credit Doctoral Continuation course each semester thereafter.

Neuroscience Journal Club/Speaker Series

During every year of their graduate training, students are required to icipate in a Neuroscience Journal Club that will include presentations by faculty members, students and outside speakers. These sessions will encourage interaction among the students and faculty conducting neuroscientific research.

Progress Timeline

Gudelines for the first two years of the program are spelled out in Beginning the Program. For the remainder of the program, the different Ph.D. tracks have different deadlines. See the Progress Forms page.

Year Three

Dissertation Committee Fro (Form 10)

Due May 15

Cumulative Student Progress Form (Form 1)

Due May 15: Students submit the Cumulative Student Progress Form each year. Save this form and update it whenever a requirement is completed.

Year Four

Dissertation Proposal Defense Approver (Form 7) Due December 1

Ph.D. Thesis Forms

If you are finishing your Ph.D. in four years, the approval forms are due April 1. Students who successfully defend by early April can march in the May commencement.

Cumulative Student Progress Form (Form 1)

Due May 15: Students submit the Cumulative Student Progress Form each year. Save this form and update it whenever a requirement is completed.

Year Five

Ph.D. Thesis Forms Due April 1. Students who successfully defend by early April can march in the **Magenoement**.

Cumulative Student Progress Form (Form 1)

Due May 15: Students submit the Cumulative Student Progress Form each year. Save this form and update it whenever a requirement is completed.

Quantitative Track

Quantitative psychology is a core arefapsychology that studies methodological issues that arise in conducting research in social and behavioral sciences. The methodological issues include research design, development and application of statistical methods for data analysis, psychometrics, and mathematical modeling of psychological processes.

The graduate program in the Quantitative concentration offers research training in quantitative methodology. The primary goal of the program is to train students to become quantitative psychologists who have their own line of research in quantitative methodology.

Psychology Faculty Affiliated with the Program

- x Hao Wu

Courses in Quantitative Methods

PSYC5501 Experimental Design & Statistics

This course focuses on experimental design and related statistical methods. It covers **betubjeent**, within-subject, and mixed designs with one and two factors. Statistical topics include the relevant statistical model and model assumptions, omnibust, teest of contrasts, multiple comparison, effect size, and power calculations. One and two sample t tests will also be revisited.

PSYC5502 Multiple Regression

This course is devoted to the study of multiple regression as a general framework for astressing relationship of a dependent variable with a set of independent variables. The course covers the following topics: regression with a single predictor, multiple regression with two or more predictors, regression with a categorical predictor, multiple **regression** with interaction. If time allows, the course

PSYC6602 Analysis with Missing Data

This course is to priode an introduction to the theory and application of analytic strategies for analyzing data with missing values. This course is designed as an advanced level graduate level course. It is assumed that students are familiar with multiple regression and **tirac** equation modeling, and are able to conduct analysis using these techniques on their own. The following topics are covered: missing data mechanisms, traditional methods for dealing with missing data, maximum likelihood method, maximum likelihood withauxiliary variables, and multiple imputation. Mplus and SAS are used as primary software packages. R packages will be introduced for multiple imputation starting Fall 2018.

PSYC6605 Introduction to Multivariate Statistical Methods

Topics covered in thisads include: Matrix algebra and basic concepts in multivariate statistics; Exploratory factor analysis of continuous, dichotomous and ordered categorical data with analytic rotation; Principle component analysis; Discriminant analysis; Correspondenceian@lystering; Multidimensional scaling. SPSS and R will be the main computational tool. Students should have taken a graduate level linear regression class before enrolling this class. Starting1&YR will be used along with SPSS.

PSYC#### Nonparatric Statistics

It is likely that a graduate level course in nonparametric statistics will be offered starting 199/18

Course Requirements

Nine courses are required as outlined below, which is more than the six required for the other concentrations. The

- x PSYC6602 Analysis with Missing Data
- x PSYC6605 Introduction to Multivariate Statistical Methods
- x PSYC66xx Bayesian Statistical Methods
- x SOCY7704 Regression Mlsdier Categorical Data
- x SOCY7705 Advanced Statistics
- x SOCY7706 Longitudinal Data Analysis
- x SOCY7708 Hierarchical Linear Modeling
- x SOCY7709 Quantitative Data Management
- x SCWK9951 Survey of Research Methods in Social and Behavioral Research
- x SCWK9953 Crosaltural Issues in Social and Behavioral Research

May 15

Students are passed into Doctoral Candidacy when they have successfully defended the dissertation proposal.

Year Five

Work on dissertation, which should be successfully defended by June.

Students who successfully defend by early April can walk in the May commencement.

Progress Evaluation

There are two important kinds of evaluations, by oneself and by the department.

SelfEvaluation

How am I doing? Every student asks this question, and of course the answer depends on individual goals. Here are some benchmarks. By the of August of your:

First Year: You have attended a professional conference. You are hard at work at your research. Your advisor is now your collaborator. You have done well in classes.

Second Year: You have presented a paper/poster at a profession falce soce. You have submitted a $\[mmmode] \[mmmode] \[mmmode$

Third Year: You have now presented a second poster at a conference, published a journal article and submitted two more, one based on your literature review and anotheyour research.

Fourth Year: You have now presented a third poster and have published two journal articles. Your dissertation research is well underway. You are taking the lead on your research, with your advisor in a secondary role. You are on target **torc** plete your dissertation during your fifth and final year of department funding.

Departmental Evaluation

Throughout your time in the graduate program, the department must evaluate your progress. This handbook describes the minimal requirements all studermust meet. These requirements must be met on a timely basis and in a way that demonstrates outstanding effort and results of high quality including high course grades and conscientious fulfillment of teaching assignments. The Graduate Program Director isosponsible for monitoring a student's teaching performance and will forward any cases of substandard performance for review by the Graduate Evaluation Committees and performance may result in the loss of a student's stipend.

Beyond this, studets are evaluated against a standard of excellence. During their time in graduate school, students are expected to do much more than the minimal requirements laid out in this handbook. We expect each student to be immersed in psychology, doing researcheschesi dissertation: presenting at conferences, attending colloquia at Boston College and at other universities in the Boston area, and so forth. Graduate school is **a** in **b** enterprise.

At the end of the second yeartypically by June ♥Ph.D. students ₩ be asked to continue on in the ‰ Œ } P Œ u } Œ š } Æ]šU šÇ‰] ooÇ Á]šZ D •š Œ [• P Œ X ^šµ vš• Á requirements of the first two years, and who have shown the capacity to carry out excellent independent research, will bæsked to continue on in the program as doctoral students. If the Graduate Evaluation Committee grants a student an extension on any of the requirements of the first two years, a formal evaluation will be conducted again once these requirements are complience order to determine whether the student will be asked to continue on in the program. Extensions are frowned upon and will not be granted unless the student is performing at an excellent level and has a good šÁ v šZ •šμ vš[• À}oÀ]vP]vš Œ •š• v Œas tŒoft‰r. 35hZs v ÁZ š}μŒ secondyear evaluation is a good time to assess that fit.

Unsatisfied Requirements

AdvisorStudent Relationsps

What to Expect

Experience and research have denstrated that the nature of supervision and the quality of communication between graduate students and their advisors are critical elements affecting graduate education. The quality of the dissertation and of the educational experience is enhanced, domplet rates are increased, and time in the program are reduced when graduate students and their advisors work closely and effectively together. The guidelines here are necessarily broad, merely suggesting underlying principles and basic procedures that cahænce academic quality, safeguard student welfare, and expedite progress towards satisfactory completion of degree requirements.

The principal role of the advisor is to help the student achieve his or her scholarly potential. The student has a right to expect commitment, accessibility, professionalism, stimulation, guidance, respect, and consistent encouragement from the advisor. In turn, the advisor also has a right to expect commitment, professionalism, and respect from the student. The advisor should bit able to help at every stage, from formulation of research projects through establishing the methods and discussing the results, to

- x Select and plan a suitable and manageable research topic for the sttodporsue
- x Establish (with input from the student and colleagues) a preliminary advisory committee, and convene a meeting, normally at least annually, to discuss the student's progress. When there is a conflict in advice or when there are different expatiations on the part of members of the advisory committee, the advisor and student are expected to endeavor to achieve consensus and resolve the differences in perspectives.
- x Keep each other informed of matters (such as leaves or vacations) that may affier φ btht
 Á } Œ I v šZ •šµ vš[• ‰ Œ } P Œ ••X dZ Ç •Z } µ o o• } Á } Œ I š } P šZ
 •šµ vš[• •µ‰ Œ À]•] } v ÁZ v šZ À]• } Œ Á]oo vš (} Œ Æš v longer.
- x Maintain awareness of and share information ab**out**rent program requirements, deadlines, sources of funding, etc.
- x Acknowledge appropriately their respective contributions in presentations and in published

TimeRelated Problems

Students are expected to fulfill their requirements write their second year Research Project, third year Literature Review, Dissertation Proposal, and Dissertation, as well as **ethearch** writeups t in a timely manner. Nevertheless, circumstances can arise that produce delays. Conflicts with advisors and the Student Evaluation Committee can be minimized by bringing these circumstances to their attention ahead of time.

Faculty are repected to return student work in a timely manner as well, with three weeks being the longest amount of time a student should normally have to wait for feedback, provided the student has submitted the work at the appropriate time. The best tactic herebianake arrangements with your advisor ahead of time.

Problems as TA or TF

Any problems you encounter in your role as TA or TF can be brought to one of the committee members or the Graduate Program Director.

Bring Your Concern to Graduate Program Committee
